Experiment 21: Towers of Hanoi

Aim

To write a Prolog program to solve the Towers of Hanoi problem.

Procedure

1. Define the recursive rule for moving disks.
2. Move N-1 disks from Source to Auxiliary.
3. Move the largest disk to Destination.
4. Move the remaining disks from Auxiliary to Destination.
5. Execute the query and observe the sequence of moves.

Result

Thus, the Towers of Hanoi problem was implemented successfully.
