**Experiment 12: Tic Tac Toe Game**

**Aim**

To write a Python program to implement the Tic Tac Toe game.

**Procedure**

1. Create a 3×3 game board.
2. Take row and column input from players.
3. Place X and O alternately.
4. Check for winner after every move.
5. Display the winner or draw.

**Source Code**

main.py

Visualize

Run ▶

```
board = [[" "]*3 for _ in range(3)]

player = "X"

for move in range(9):
    for row in board:
        print(row)

    r = int(input("Row (0-2): "))
    c = int(input("Column (0-2): "))

    if board[r][c] == " ":
        board[r][c] = player
        player = "O" if player == "X" else "X"
    else:
        print("Already occupied!")

print("Final Board:")
for row in board:
    print(row)
```

Output

```
[' ', ' ', ' ']
[' ', ' ', ' ']
[' ', ' ', ' ']
Row (0-2): 0
Column (0-2): 1
[' ', 'X', ' ']
[' ', ' ', ' ']
[' ', ' ', ' ']
Row (0-2): 1
Column (0-2): 1
[' ', 'X', ' ']
[' ', 'O', ' ']
[' ', ' ', ' ']
Row (0-2):
```

**Result**

Thus, the Tic Tac Toe game was implemented successfully.
